LIGHTING SOLUTIONS

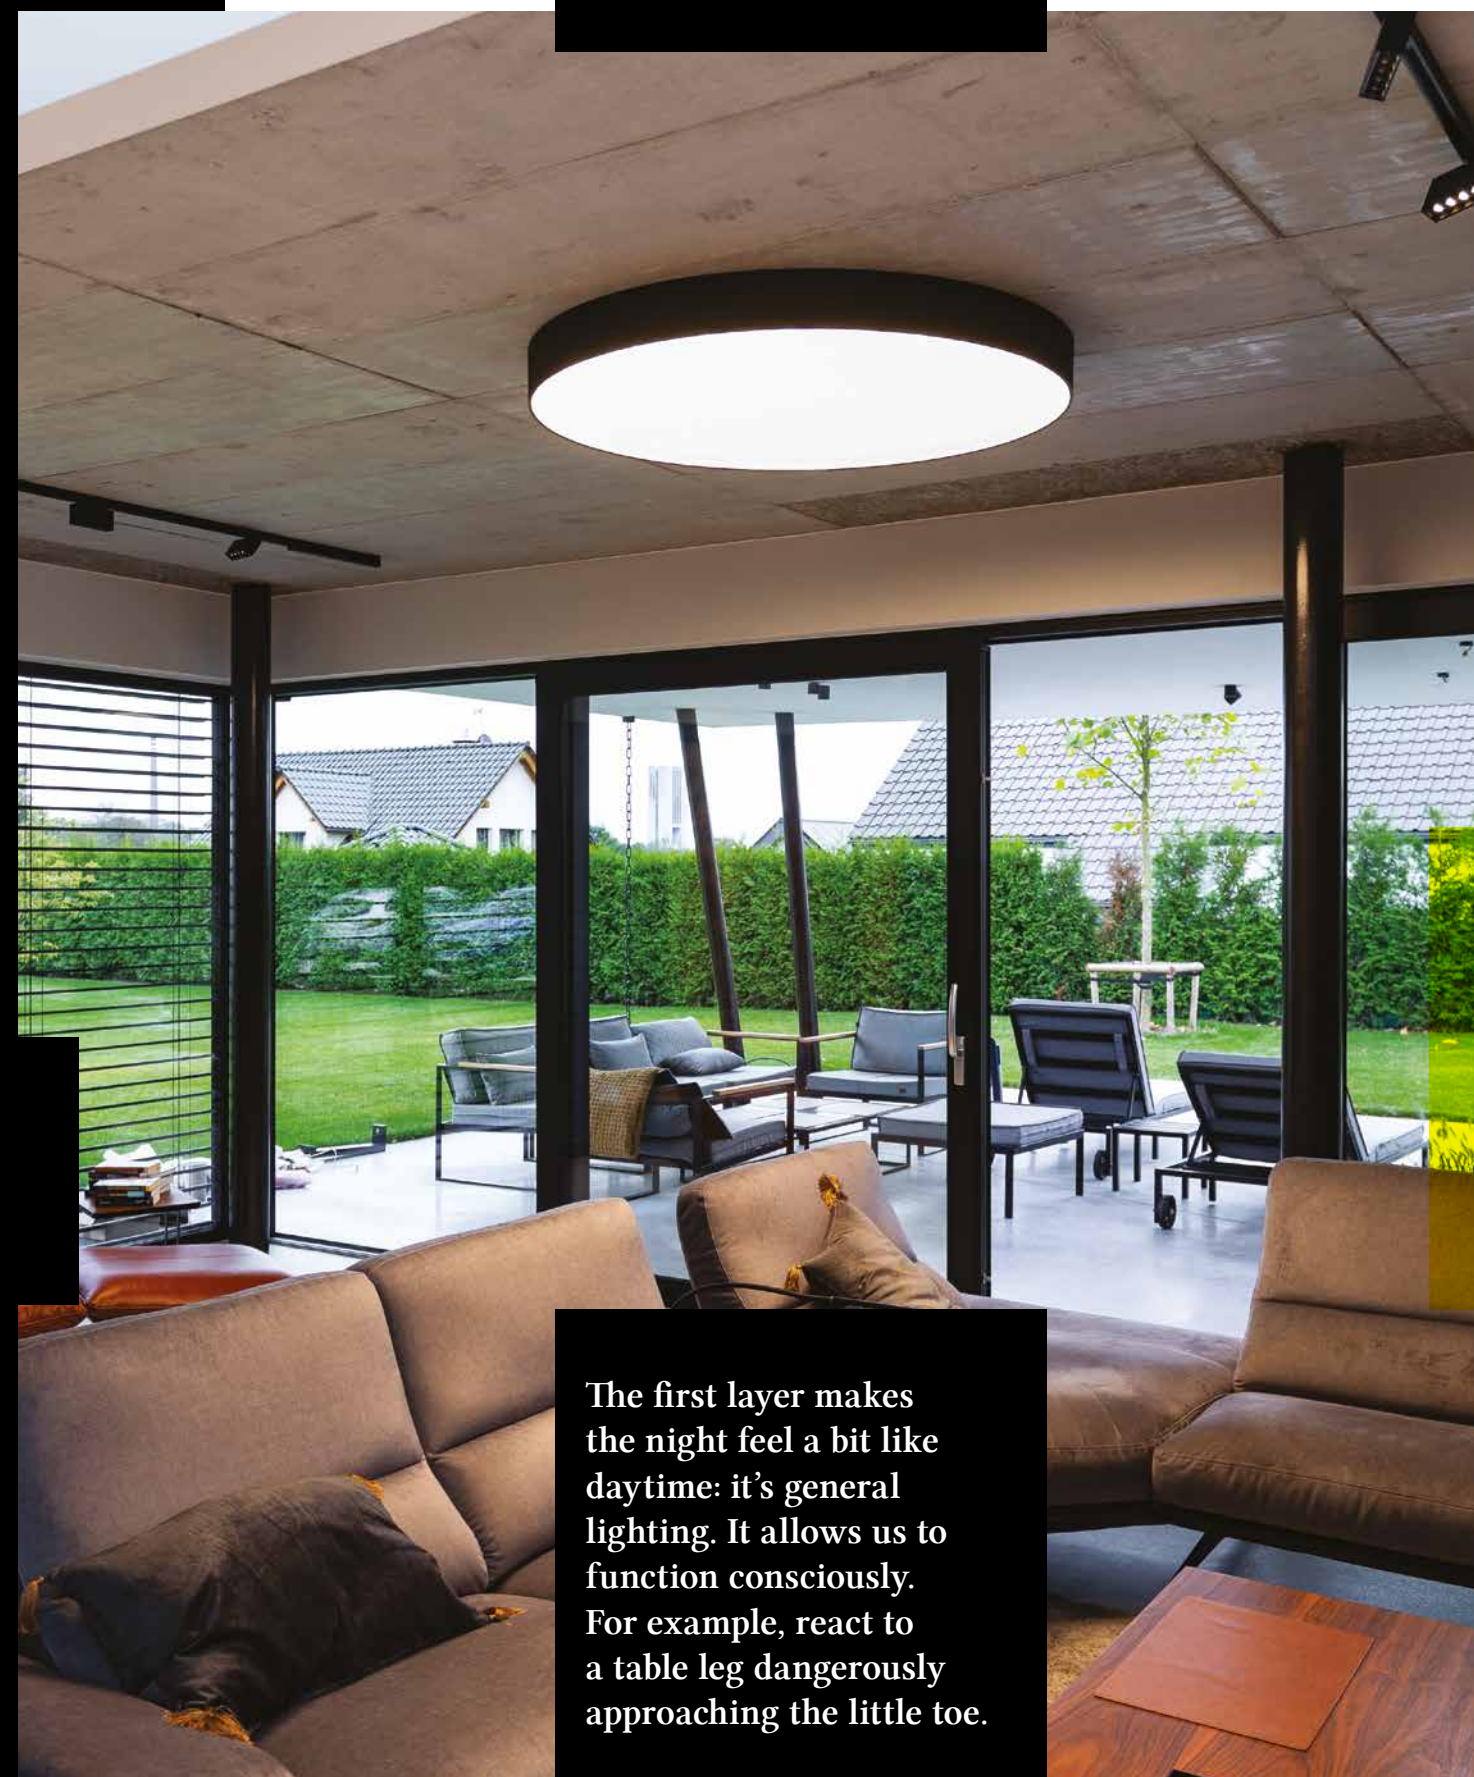

HOME

Light Forms Life

Light accompanies us every day. It brings items out of the dark. It gives the interior a glow and shapes the atmosphere. It directly forms how we see what surrounds us. The beam angle, dispersion degree and intensity, they all affect how we perceive the viewed object.

Each apartment is different. It is difficult to find an object as versatile as a residential building. At home we rest, work, study, cook, bathe, read, watch movies, sew, meet friends, play board games and perform hundreds of other activities. Our lighting needs vary depending on the time of day, type of activity and individual preferences. And while most buildings have specific functions, houses often contain... all of them. Therefore, home lighting has layers. We invite you to discover beauty of well lit interiors!

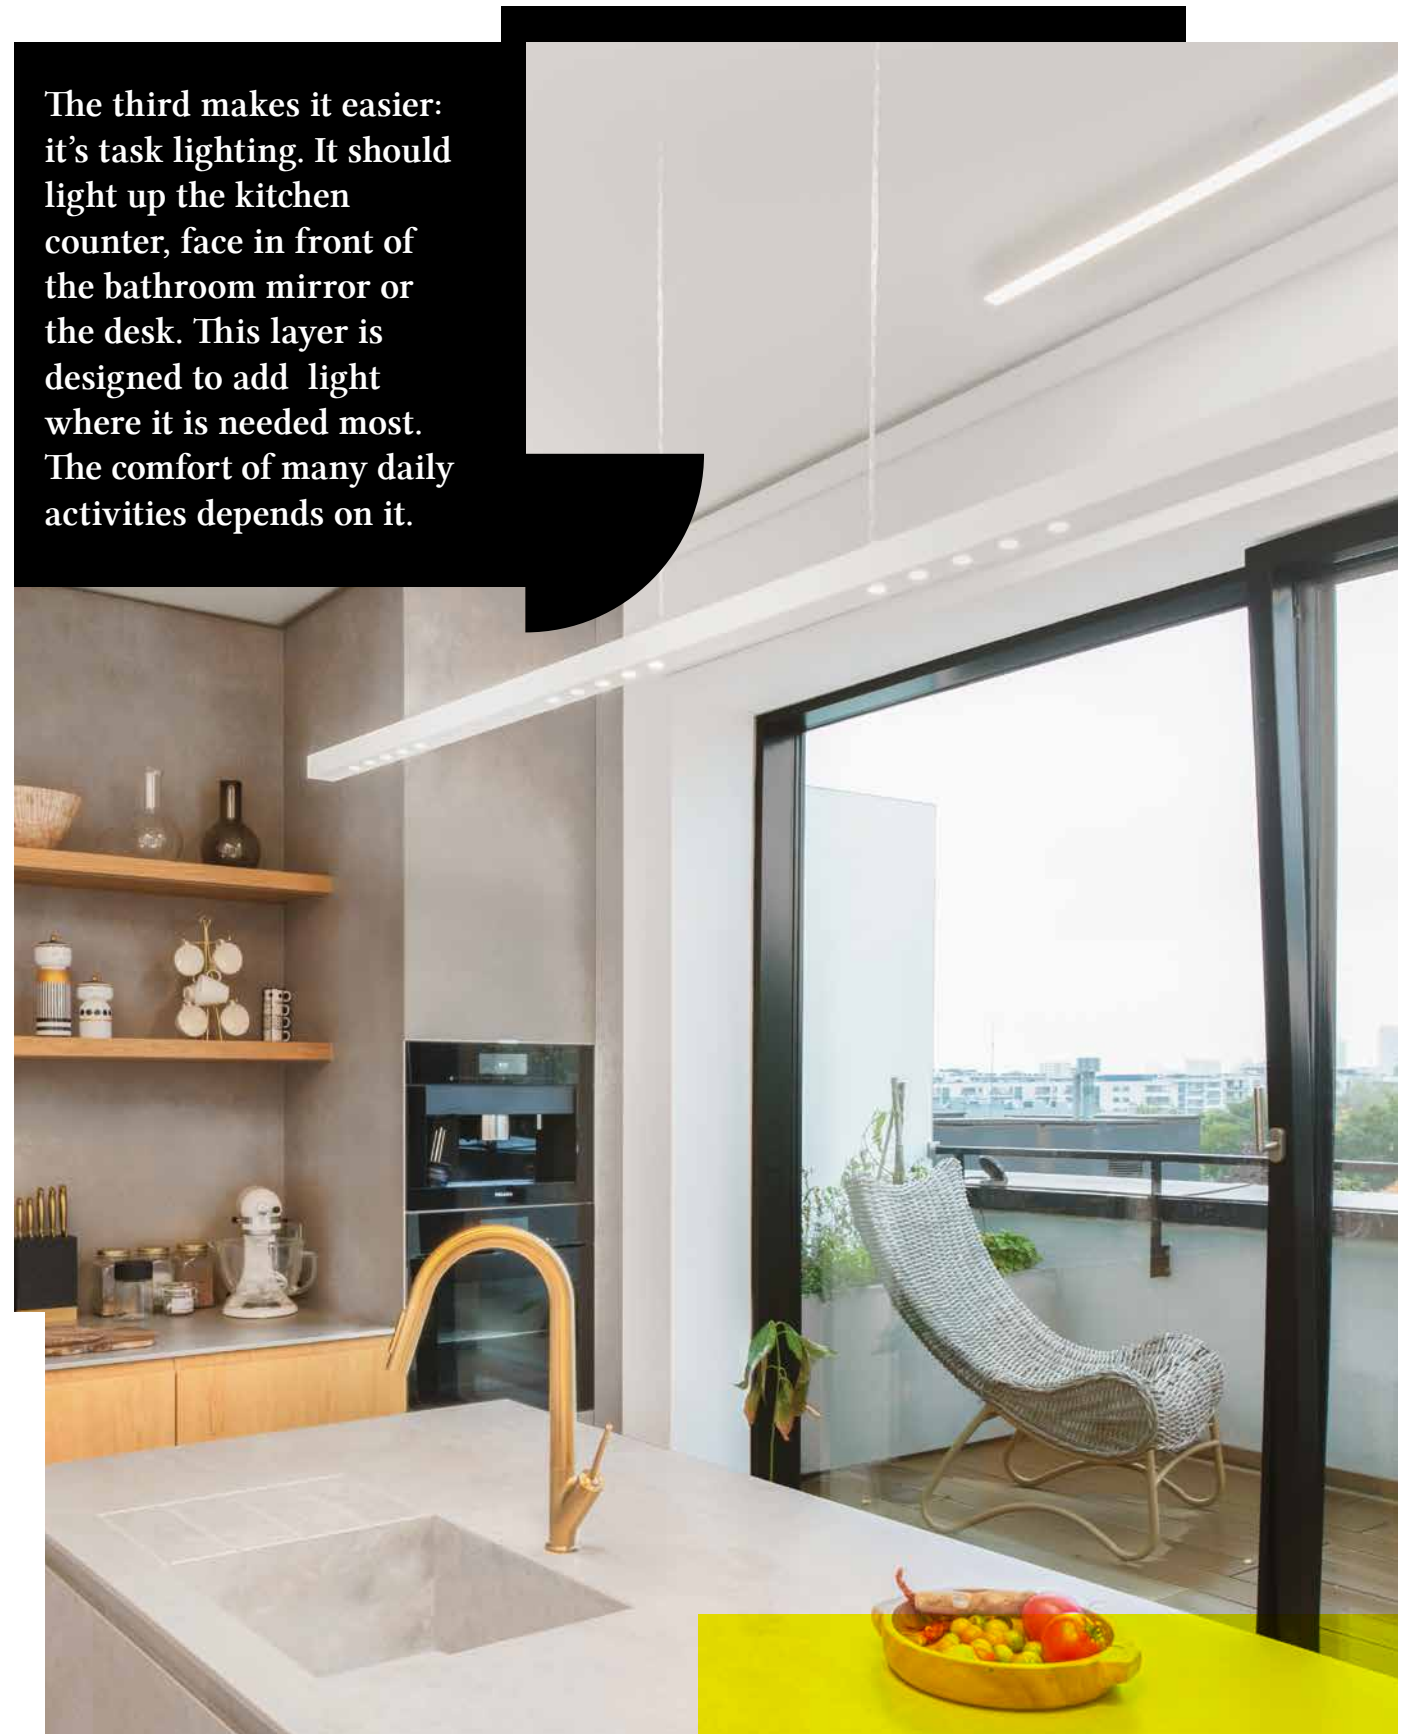

The first layer makes the night feel a bit like daytime: it's general lighting. It allows us to function consciously. For example, react to a table leg dangerously approaching the little toe.

The second lighting layer makes it nice: it's accent lighting. It can emphasize the most beautiful elements of the interior, "paint" something on the wall with light. Acting alone is most essential in the evening and at night. It allows you to move safely around the apartment and also it supports rest and relaxation.

KLIVA E27 surface

The third makes it easier: it's task lighting. It should light up the kitchen counter, face in front of the bathroom mirror or the desk. This layer is designed to add light where it is needed most. The comfort of many daily activities depends on it.

Multifunctional series with a wide range of possibilities

Depending on the selected variant, opal diffuser version, the luminaire provides comfortable general lighting, while in the points version – effective task lighting. The deeply recessed LEDs are shielded excellently, allowing very high intensity task lighting with no glare at all. The multitasking RAFTER mix version, combines several functions within a single product. How is this possible? The points modules act as a task lighting, while the slender PET spotlights direct the light to the chosen detail – a favorite painting or original decorations on the walls.

A discreet way to achieve effective lighting

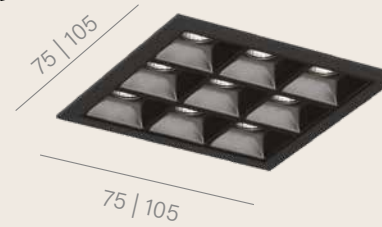

RAFTER family luminaires offer many interior lighting possibilities. Precise optics and deeply embedded diodes of RAFTER points models ensure effective lighting and low glare. Milky covers, various lengths and power versions of RAFTER luminaires offer good general lighting. RAFTER wall washer fixtures are used to illuminate walls evenly from ceiling to floor. On the other hand, RAFTER mix combines various lighting methods – point modules and reflectors or a milky cover.

Multifunctionality hidden in a slim, linear form

The MIXLINE collection is the perfect choice, especially when one product is to perform several functions. The luminaire combines two types of optics: diffuse and point light, making it suitable for general and task lighting. The part with a cover emits softly diffused light, providing general illumination of the room, while the point light guarantees appropriate intensity on the working surface of the countertop or table. MIXLINE is also a great solution for lighting passageways in homes, offices and hotels.

The simple linear form of LENS LINE is a timeless shape that corresponds perfectly with modern interiors. LENS LINE directional light can both illuminate a room but also employs light and shadow in order to bring shapes and colours out and enhance atmosphere.

RING dot LED
 midi | maxi

Comfortable lighting
 in a contemporary style

The MIDI/MAXI RING dot collection provides two key features within a single product. It emits softly diffused reflected light while impressing with its remarkable form. The eye-catching, centrally embedded, "dot" element plays a dual role: on the one hand, it adds aesthetic piquancy, on the other - it hides the light source from the user's view for the highest visual comfort. In the version with a white interior, the RING dot will provide comfortable general lighting. Moreover, variants with a coloured interior are perceived as a kind of jewelry of the interior, often used as a wall fixture.

Effective, stylish and discreet

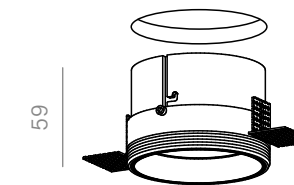

The PUTT family includes various sizes, power versions and beam angles. Additionally, there are two installation versions: with and without a frametrim. A wide shielding angle ensures low glare and high visual comfort. It can be additionally increased by honeycomb accessories.

The move version allows you to tilt the spotlight and use it as accent lighting. Hermetic models with increased tightness are perfect for bathrooms.

The PUTT family is complemented by a fixture for a traditional light source with a GU10 base.

Putt

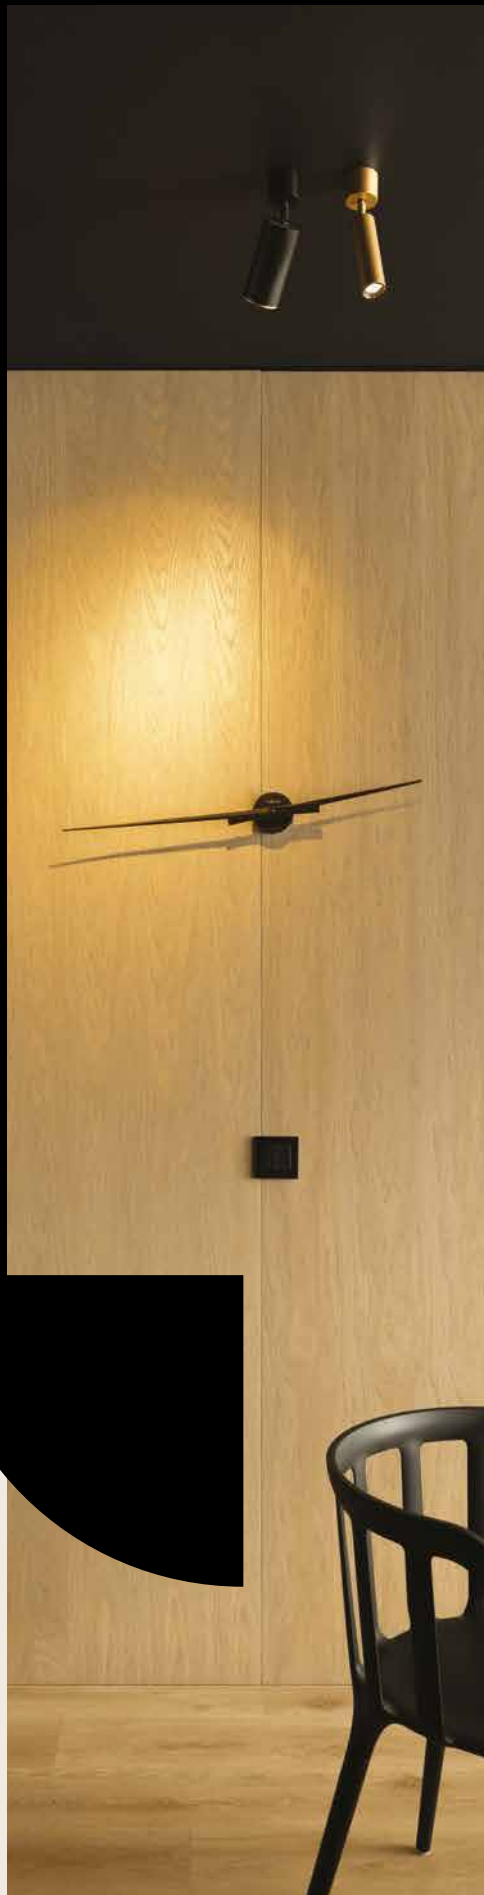

Only a few centimeters of height in the suspended ceiling? With its small height PUTT is the right solution.

Subtle interior decoration

Pet

The PET LED collection was designed to combine performance with elegance. It has excellent technical parameters both in terms of efficiency and visual comfort. With variety of optics and available powers can suit both residential and professional users. The ability to change the colour of the outer body and the ring is an invitation to play with the finish.

Some interiors require a special atmosphere. A quiet restaurant, a cozy cafe or a home living room are spaces where light plays a special role – soothing the senses, promoting a sense of relaxation and tranquility.

Multitrack

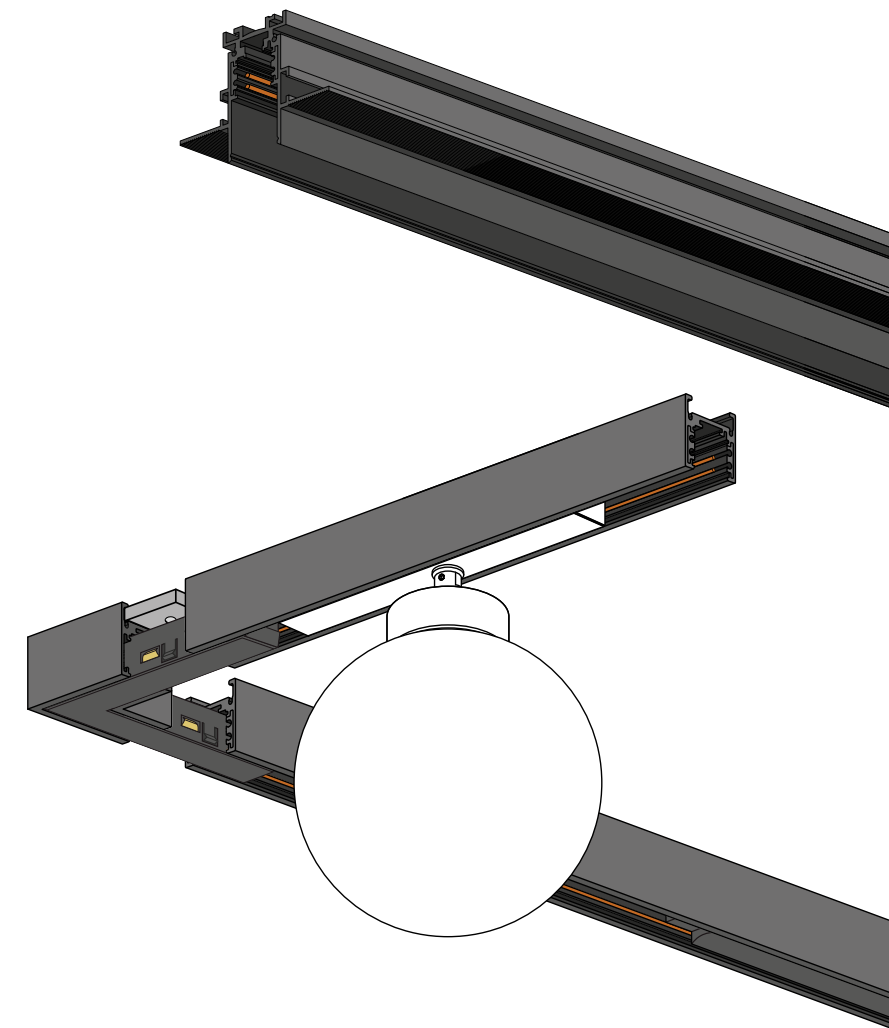

Flexibility in a simple form

The MULTITRACK system is available in surface-mounted, suspended and recessed versions, as well as in two depths.

Available accessories and connectors allow you to create complex systems, even with adirect transition from the ceiling to the wall.

There is a safe voltage of 48V inside the track, so the MULTITRACK system can also be used in places within easy reach.

The MULTITRACK system requires a separate power supply. It can be installed in a suspended ceiling or in built-in furniture. Another solution is to use the power supply in a surface-mounted box mounted on the ceiling and constituting an extension of the track. There is also a power supply plugged directly into the track (exactly the same as the luminaires), as well as a power supply mounted on a DIN track in the distribution box. There are plenty of possibilities. Each of them requires slightly different electrical installation.

THIN TUBE twist LED hermetic wall

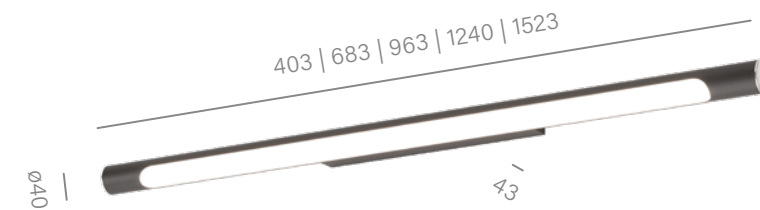

Learn an effective way to illuminate a mirror

Some cosmetic procedures, such as shaving or makeup, require true precision. So it is worth taking care of the appropriate lighting. This task will be perfectly handled by the THIN TUBE collection, which is known for its sleek, slender form with a diameter of only 4cm! Efficient wall lamp will effectively illuminate a mirror with a width of 30cm to even 150cm, and the updated optics will even better illuminate the face, allowing you to see every detail.

Discover lighting tailored for a functional bedroom

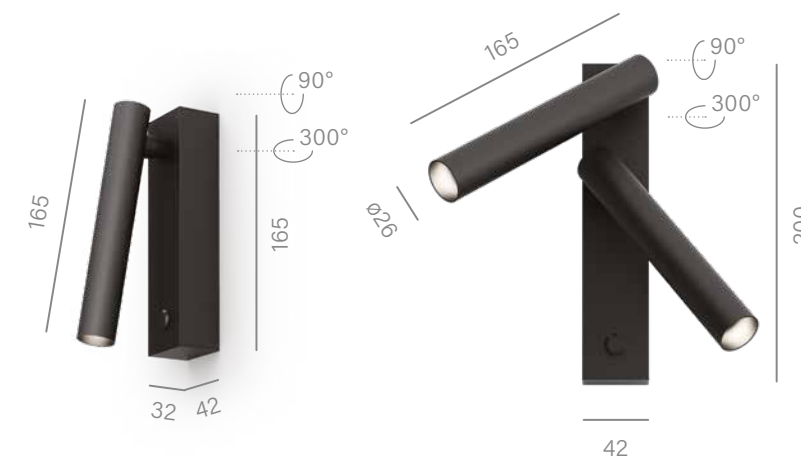

Lighting often accompanies us from the first moments right after waking up, until the end of the day, when we go to bed again. At this time, the PET micro, created for keen evening readers, will be perfect. Mounted by the bed, thanks to a movable element, allows you to precisely direct the light right to next pages of your book. Moreover, the excellent technical parameters provide the highest reading comfort, without illuminating the space around.
